AS HEARD ON 

One of the most common landscape problems is a sloping block. Whether it's gradual or dramatic, an incline can make a garden patch difficult to use and so it becomes a wasted space. However, the solution is a lot easier than you may think. With an age-old technique known as 'cut and fill', you can transform an area from leaning to level for a surprisingly small cost. You use the excavated soil to create your levels, so this saves on disposal costs. Basically, what you shave off the top goes behind the new retaining walls. Read on for great ways to turn a sloppy slope into a terrific terrace. ▶
